

Sanitary Sewer Construction in De Pere

Sanitary Sewer Construction

In May, the Green Bay Metropolitan Sewerage District (GBMSD) will be lining sewer, repairing faulty connections, and rehabilitating manholes so it can continue to provide safe, reliable service to the De Pere area.

Sewer repair work will generally be located on private easements and the public right-of-way along the Fox River Trail, Front Street, and Fox River Drive between the Fox Point Boat Launch and Heritage Road.

Sewer work will also occur on Charles Street between Broadway Street and Webster Avenue.

Affected property owners were notified by mail about the upcoming construction project. Traffic is expected to be maintained; however, some temporary lane closures and traffic rerouting may be necessary. Work is scheduled to start in May and be completed by the end of 2012.

For more information about the project, visit www.gbmsd.org.

WaterSense Partnership

GBMSD is now a Promotional Partner with the Environmental Protection Agency's (EPA) WaterSense Program. WaterSense is a partnership program established by EPA, which seeks to protect the future of our nation's water supply.

The WaterSense Program brings together a variety of stakeholders to:

- Promote the value of water efficiency.
- Provide consumers with easy ways to save water, as both a label for products and an informational resource to help people use water more efficiently.
- Encourage innovation in manufacturing.
- Decrease water use and reduce strain on water resources and infrastructure.

The WaterSense Program can help consumers make smart water choices that will save money and still maintain high environmental standards. The products and services that have earned the WaterSense label have been certified at least 20 percent more efficient than conventional products and services. For example, if one in every 10 homes in the United States were to install WaterSense labeled faucets or faucet accessories in their bathrooms, it could save six billion gallons of water per year, and more than \$50 million in the energy costs to supply, heat, and treat that water.

Example digesters: Hillsboro, Oregon

Resource Recovery & Electrical Energy Project

The Resource Recovery and Electrical Energy (R2E2) Project is moving forward after a series of public informational meetings and a public hearing, which took place on January 31. Comments on the project were accepted until February 14. GBMSD received two comments.

A request for design proposals was sent out on February 15 and proposals

are due back by March 30. As part of the communication strategy for the project, a stakeholder committee made up of municipal, industrial, and civic group representatives met on March 6. The group will meet quarterly throughout the project so stakeholders are kept informed of the project's progress and costs. More information on the project is available at www.gbmsd.org.

New Commissioner Mark Tumpach

GBMSD welcomes a new Commissioner, Mark Tumpach. Mark replaces Tim Carpenter, who resigned in 2011. Mark is a Brown County Supervisor for District 1 and a Portfolio Manager and Equity Analyst for Kellogg Asset Management, an affiliate of Associated Banc-Corp.

Schedule	Date
Design Proposals Due	March 30
Design Consultant Selection	April - May
Commission Approval	May 23
Design	June 2012 - 2013
Construction	2014 - 2017
